Education

• Harvard University

Cambridge, MA

PhD in Applied Physics Expected May 2018

- Working Thesis Title: Experimental Microbial Evolutionary Dynamics and Transport
- Designed experiments to study microbial colony growth on the surface of complex fluids and materials; applied stochastic, random-walk methods to model colony evolutionary dynamics
- Utilized fluid and solid mechanics to simulate microbial colony morphology

• Harvard University

Cambridge, MA

PhD Secondary Field: Computational Science and Engineering (CSE)

Expected May 2018

- $\,$ Completed advanced applied math and scientific computing courses
- Learned state-of-the-art computational methods used in scientific research and data science
- Capstone: Developed an OpenCL powered Lattice Boltzmann fluid mechanics simulation utilizing OpenGL for real-time visualization.

• Harvard University

Cambridge, MA

November 2014

- Completed 12 courses: 4 physics core courses, 4 CSE courses, and 4 soft-matter/biophysics electives
- GPA: 3.95/4.00

S.M. in Applied Physics

• Case Western Reserve University

Cleveland, OH

Bachelor of Science in Engineering, Engineering Physics

May 2012

- GPA: 4.00/4.00, Summa Cum Laude, Valedictorian
- Engineering Concentration: Aerospace Engineering
- Senior Project: Simulating Interactions between Confined Spins and Ferromagnetic Vortices

Certifications

• Engineer in Training (EIT)

Ohio

Active

September 2012

 Successfully passed Fundamentals of Engineering Exam, the first step towards becoming a licensed Professional Engineer (PE)

Engineering Skills

• **Summary:** Expert ability to create experiments, models, and numerical simulations to study the transport of mass, momentum, and energy in complex fluids and materials

• Analytical and Numerical Skills

- Ability to mesh and simulate fluid flows containing chemical reactions using standard open-source tools (OpenFOAM, gmsh, SALOME) or custom-built GPU-powered Lattice Boltzmann tools
- Experience simulating multicomponent multiphase flows using the Lattice Boltzmann technique
- Expert knowledge of Applied Mathematics, including stochastic modeling involving the Master equation, the Fokker-Planck equation (PDEs), and (spatial) stochastic differential equations
- Ability to use core physics training to create and calibrate models to match experiments

• Experimental Skills

- Adept at designing and conducting biological and soft matter experiments involving complex fluids and materials; four years of research in a molecular biology laboratory
- Expertise in use of rheometers to quantify fluid rheology, microscopy to image microbial colonies, and computational tools to analyze images

Computational Skills

- Developed over 30 GitHub repositories and wrote hundreds of Jupyter/IPython notebooks to create scientific simulations and analyze experimental data during my PhD (see my website above)
- Over 8 years of experience optimizing programs to run on multiple processors, graphics processing units (GPUs), and supercomputers
- Expert at using Jupyter/IPython Notebooks to explore, visualize, and analyze large tabular datasets and large collections of images
- Experienced at applying stochastic techniques to model and solve high-dimensional problems
- Languages for General Scientific Computing:
 - Python, Cython, OpenCL, CUDA, C, C++, Java, Mathematica, Matlab
- Selected Python Packages and Tools:
 - IPython/Jupyter Notebook, matplotlib, seaborn, numpy, scipy, pandas, scikit-image, pymc3, cython, cython_gsl, PyOpenCL, PyCuda
- Fluid and Solid Mechanics Simulations:
 - Lattice Boltzmann Method (custom-built code), OpenFOAM, SALOME, gmsh
- Image Analysis Tools
 - Python, OpenCL, ImageJ/Fiji

Fellowships and Awards

- Institute for Applied Computational Science Scholarship

 Graduate Student

 Cambridge, MA

 September 2016 September 2017
 - Wrote proposal and won a \$25,000 student scholarship from Harvard's Institute for Applied Computational Science (IACS)
 - Used funds to further develop my IACS capstone: an OpenCL-powered Lattice Boltzmann fluid mechanics simulator utilizing OpenGL for real-time visualization
- Department of Energy Office of Science Graduate Fellowship Washington, D.C.

 Graduate Student September 2012 September 2015
 - Wrote proposal to win a competitive fellowship that supports students pursuing training in areas relevant to Department of Energy (DOE). Selected out of 1,300 applicants; 50 fellowships awarded
 - Attended yearly conferences at National Laboratories; presented posters on my active research, networked with other DOE fellows and government officials
- Harvard University Pierce Fellow

Cambridge, MA

Graduate Student

September 2012 - September 2015

 Won fellowship awarded to the highest caliber PhD students accepted into Harvard's School of Engineering and Applied Sciences (SEAS). Selected out of 150 students; 8 fellowships awarded
